Last Call

"The mystery starts when the workweek ends."

THE PITCH

Last Call is a self-contained mystery puzzle game kit designed for burnt-out professionals in their 30s who want maximum fun with zero planning — just crack open the box, launch the companion app, and your kitchen table transforms into a fully atmospheric escape room for 4–6 players in under two minutes. Each kit ships with physical evidence envelopes, combination locks, cipher cards, and branching clue packets built around a fresh narrative — a 1920s speakeasy murder, a corrupt corporate cover-up, a midnight heist gone wrong — while the app layers in ambient sound, a countdown timer, and story reveals that respond to how your group plays. One-off kits run \$35–50 and are designed to be non-repeatable, so every session stays genuinely high-stakes; subscribers get a new themed mystery delivered monthly, keeping the ritual alive without anyone having to lift a finger between sessions. Last Call is built for the Saturday night when everyone's too drained to go out but too wired to just watch TV — the moment you need a reason to gather, laugh, and feel like yourself again.

FOR WHOM

Maya, 34, is stress-scrolling LinkedIn at 10pm on a Friday wondering why her weekend already feels wasted, desperately craving something that feels like an event without requiring her to plan one.

MOCK SCREENS

9:41

LAST CALL · CASE NO. 07 · THE ROOFTOP HEIST · OPEN AFTER 9PM

The elevator opens. Marina's keycard is missing. The safe drops in 4 minutes.

Someone at this table tipped off the night guard — cross-reference the visitor log, the matchbook, and the gold lighter before

9:41

LAST CALL · MYSTERY KIT · DO NOT OPEN UNTIL EVERYONE IS HERE

Someone poisoned the champagne. Everyone had a reason.

Friday, 11:47 PM. The last train already left. Nobody's going anywhere.

 90 MIN BEFORE MIDNIGHT

9:41

LAST CALL · MONTHLY DROP · SEALED UNTIL SATURDAY

Someone changed the will. Someone in this room.

6 suspects. 4 envelopes. 1 cipher lock. You have until midnight to name the heir — or the estate burns.

 47:23 REMAINING

 CLUE DECK 11 OF 12

CORE FEATURES

- **Mystery Envelope Stack** — each session opens with a sealed Master Envelope containing role cards, suspect dossiers, and a QR code that launches the Last Call companion app; players are assigned asymmetric information so no single player holds the full picture, forcing real-time negotiation and deduction across the table
- **Pressure Clock System** — the app runs a live ambient soundtrack tied to a countdown timer calibrated per mystery difficulty (45, 60, or 90 minutes); as time depletes the audio darkens and the app surfaces automated nudge clues called Last Rounds, preserving momentum without a human host
- **Evidence Chain Mechanic** — physical clue cards must be physically combined in specific pairs or trios and held together to reveal hidden ink patterns or UV-light messages, creating tactile aha moments that screens alone cannot replicate
- **Consensus Lock** — before the group can submit a final accusation they must unanimously tap a shared Verdict Screen in the app within a 60-second window, punishing solo grandstanding and rewarding genuine group alignment
- **Season Arc Progression** — each monthly subscription kit is a standalone mystery but contains a torn page from a recurring meta-document; after six kits players can scan all six pages to unlock a bonus seventh mystery downloadable exclusively through the app, driving retention across the subscription cycle
- **Role Drift Cards** — midway through each session a hidden Twist Envelope is opened that reassigns one player a secret secondary loyalty (accomplice, witness, saboteur), introducing a social deception

MOODBOARD

layer that recontextualises earlier evidence without requiring prior bluffing experience

- **Replay Variance Seeds** — each kit ships with two alternate Culprit Inserts sealed separately, so the same group can replay the box on a future night with a legitimately different solution, doubling perceived kit value and reducing buyer hesitation at point of sale

USER FLOW

STACK SUGGESTION

STORE App Store + Google Play (companion app, free download gated by kit QR code activation) + Shopify storefront (physical kits) + potential Amazon FBA for kit fulfillment at scale

ENGINE React Native (companion app) + no-code print-on-demand pipeline for physical kit production

PLATFORM iOS & Android (companion app) + Shopify (e-commerce + subscription management)

NETWORKING Firebase Realtime Database for shared game session state, timer sync, and branching narrative triggers across player devices on local WiFi

MONETIZATION One-off kit purchases \$35-50 via Shopify storefront + monthly subscription box \$28/mo via Recharge on Shopify; in-app upsells for bonus chapter DLC packs at \$4.99

THE VIBE TRAIL

How we got here

01 · AUDIENCE

I'm sensing a sanctuary for ambitious professionals who trade their weekday hustle for intentional weekend rituals that restore their competitive spirit.

02 · DOMAIN OR INDUSTRY

I'm sensing a theatrical escape room experience disguised as cozy home gatherings where burnt-out professionals in their thirties reclaim their playful selves.

03 · MOOD/FEELING

I'm sensing a weekend escape room theater where burnt-out thirty-somethings shed their corporate armor through dramatic, fire-fueled games that transform them from exhausted professionals into playful rebels by sunrise.

04 · PROBLEM BEING SOLVED

I'm sensing a weekend escape room theater that helps burnt-out thirty-somethings trade their time-trapped corporate identities for playful rebellion through high-stakes dramatic games.

05 · CORE INTERACTION OR MECHANIC

Ah, I see overworked thirty-something professionals who'd happily pay \$40 a head for a host-free, narrative game night box that turns their living room into a Saturday escape room.

HANDOFF PROMPT

For your AI builder

Build a working prototype of "Last Call" – The mystery starts when the workweek ends.

Security non-negotiables

Apply these from the first commit, not as a cleanup pass at the end:

- Secrets (API keys, database service keys, signing secrets) live only in server-side environment variables – never in client code, never committed to the repo.
- Use a hosted auth provider; never hand-roll password storage, sessions or password reset.
- Enforce authorization on the server for every read and write – never rely on the UI hiding things. If using Supabase/Postgres, enable Row Level Security on EVERY table with owner-scoped policies.
- Validate all input on the server with a schema (e.g. zod). Never trust client-sent IDs, prices, quantities, roles or user IDs.
- Payments: use hosted checkout; compute prices server-side; verify webhook signatures and make webhook handlers idempotent.
- Rate-limit sign-in, sign-up, password reset, AI calls and any endpoint that costs money or sends messages.
- File uploads: enforce size and type limits server-side, store privately, serve via short-lived signed URLs.
- Escape all user-generated content when rendering; never inject raw HTML from users or AI output.
- Never log secrets, tokens, passwords or personal data. Return generic error messages to clients.
- Set security headers (Content-Security-Policy, HSTS, X-Content-Type-Options) and use secure, httpOnly, SameSite cookies.
- Collect the minimum personal data needed; support account and data deletion.
- Pin dependency versions; do not add packages you do not need.

Product

Last Call is a self-contained mystery puzzle game kit designed for burnt-out professionals in their 30s who want maximum fun with zero planning – just crack open the box, launch the companion app, and your kitchen table transforms into a fully atmospheric escape room for 4-6 players in under two minutes. Each kit ships with physical evidence envelopes, combination locks, cipher cards, and branching clue packets built around a fresh narrative – a 1920s speakeasy murder, a corrupt corporate cover-up, a midnight heist gone wrong – while the app layers in ambient sound, a countdown timer, and story reveals that respond to how your group plays. One-off kits run \$35-50 and are designed to be non-repeatable, so every

session stays genuinely high-stakes; subscribers get a new themed mystery delivered monthly, keeping the ritual alive without anyone having to lift a finger between sessions. Last Call is built for the Saturday night when everyone's too drained to go out but too wired to just watch TV – the moment you need a reason to gather, laugh, and feel like yourself again.

Audience

Maya, 34, is stress-scrolling LinkedIn at 10pm on a Friday wondering why her weekend already feels wasted, desperately craving something that feels like an event without requiring her to plan one.

Core Features

- Mystery Envelope Stack – each session opens with a sealed Master Envelope containing role cards, suspect dossiers, and a QR code that launches the Last Call companion app; players are assigned asymmetric information so no single player holds the full picture, forcing real-time negotiation and deduction across the table
- Pressure Clock System – the app runs a live ambient soundtrack tied to a countdown timer calibrated per mystery difficulty (45, 60, or 90 minutes); as time depletes the audio darkens and the app surfaces automated nudge clues called Last Rounds, preserving momentum without a human host

Key Screens / Flow

1. Open mystery kit
2. Decode physical clues
3. Unlock story branches
4. Solve collaborative puzzles
5. Beat the timer
6. Claim the ending

Visual Direction

Colors: Midnight Indigo #1A1A2E, Last Round Gold #C9A84C, Dog-eared Ivory #E8E0D0, Negroni Red #7B2D3E, Smoky Blue #3D5A6C

Typography: Playfair Display (display), DM Sans (body)

Mood: atmospheric, conspiratorial, grounded, after-hours, restorative

Suggested Stack

- store: App Store + Google Play (companion app, free download gated by kit QR code activation) + Shopify storefront (physical kits) + potential Amazon FBA for kit fulfillment at scale
- engine: React Native (companion app) + no-code print-on-demand pipeline for physical kit production
- platform: iOS & Android (companion app) + Shopify (e-commerce + subscription management)
- networking: Firebase Realtime Database for shared game session state, timer sync, and branching narrative triggers across player devices on local WiFi
- monetization: One-off kit purchases \$35-50 via Shopify storefront + monthly subscription box \$28/mo via Recharge on Shopify; in-app upsells for bonus chapter DLC packs at \$4.99

Progression System

Goal: Crack the mystery before the clock runs out – each kit presents a self-contained case with a final revelation that players race toward, advancing through layered puzzle tiers (Clue Discovery → Deduction → Final Lock Sequence) that escalate in complexity and narrative tension as the session unfolds

Reward loop: Solve a puzzle, unlock a physical component or app-triggered audio reveal, feel the dopamine hit of collective 'aha' – then immediately face a harder clue that raises stakes; the loop is Struggle → Breakthrough → Story Payoff → Next Tension, repeating every 8-12 minutes to sustain momentum without fatigue

Long-term hook: Each monthly kit ships in a serialised story universe with recurring characters, cold-case callbacks, and a meta-puzzle thread woven across 12 episodes per year – solving one mystery unlocks

a cryptic clue that only pays off three kits later, making cancellation feel like abandoning a cliffhanger; collector completionism is reinforced by physical artefacts that accumulate into a display-worthy evidence board

Session: 90-120 minutes per kit for a group of 4-6 players on a Saturday or Sunday evening, designed to land comfortably after dinner and finish before midnight – one session per month aligning with the subscription cadence, with optional 30-minute Overtime Packs sold separately for groups who want extended epilogue puzzles

Monetization

Model: subscription + one-off kit sales

What's sold: Monthly mystery kit shipments (\$29-39/mo subscription) containing physical cards, clues, a combination lock, and QR code activating the companion app with ambient audio, branching storyline, and timer; standalone one-off kits sold at \$35-50 each for gifting or trial; optional add-on packs for replacement locks or bonus clue expansions

Ethics: Zero pay-to-win concerns – all puzzle content within each kit is fully self-contained and equally accessible to every player at the table; subscription advantages are novelty and cost savings only, never gameplay power or informational advantage over other players; gifted or one-off buyers receive identical play quality to subscribers

Definition of done – security

The build is not done until every check below passes. Verify each one and report the result:

- [] Logged in as user A, requesting user B's record by ID (API and direct DB access) is denied – cover this with an automated test.
- [] No secret or service key appears in the client bundle or the repo (search the build output).
- [] A payment webhook with an invalid signature is rejected; a replayed webhook does not double-apply.
- [] Rapid repeated sign-in attempts get rate-limited.
- [] Sending a tampered price, role or user ID from the client has no effect.
- [] A script tag submitted as user content renders as text, not as HTML.

Origin vibe (for reference)

audience: 🧑 🧑 → I'm sensing a sanctuary for ambitious professionals who trade their weekday hustle for intentional weekend rituals that restore their competitive spirit.

domain or industry: 🎭 🧑 🏠 → I'm sensing a theatrical escape room experience disguised as cozy home gatherings where burnt-out professionals in their thirties reclaim their playful selves.

mood/feeling: 🌙 🔥 🧑 🏠 → I'm sensing a weekend escape room theater where burnt-out thirty-somethings shed their corporate armor through dramatic, fire-fueled games that transform them from exhausted professionals into playful rebels by sunrise.

problem being solved: 😩 ⌚ 🏠 → I'm sensing a weekend escape room theater that helps burnt-out thirty-somethings trade their time-trapped corporate identities for playful rebellion through high-stakes dramatic games.

core interaction or mechanic: 🗝️ 🧩 🧑 → Ah, I see overworked thirty-something professionals who'd happily pay \$40 a head for a host-free, narrative game night box that turns their living room into a Saturday escape room.

Make it polished, interactive, with real state and transitions. Prioritize the mood above – but the security non-negotiables and the definition of done are requirements, not suggestions.
